+201027324902

Cairo, Egypt

Results-driven Flutter Developer with 4+ years of experience building and scaling cross-platform mobile applications used in real-world production environments.

Expert in Clean Architecture, state management (Bloc/Cubit), and integrating complex RESTful APIs and third-party services. Delivered 10+ full-cycle applications with a strong focus on performance, maintainability, and user-centric design.

Proven ability to lead features, optimize app, and mentor junior developers, ensuring high code quality and efficient team delivery.

Experience

Flutter Developer at First Code Lab, Giza

October 2020 - July 2024

- Developed and delivered a full-scale mobile application from scratch using Flutter, covering the complete development lifecycle from planning and architecture to deployment.
- Worked as the primary Mobile Developer, responsible for implementing, integrating RESTful APIs, and ensuring high performance and scalability.
- Collaborated within a multidisciplinary environment (backend, frontend, and programming education teams), contributing to product alignment and technical decisions.
- Transitioned to a part-time role in the later stage while maintaining support, updates, and feature enhancements.

Flutter Developer at MJ Design, Sweden

February 2021 - December 2022

- Engineered and maintained two production-grade Flutter applications within an e-commerce ecosystem: a customer-facing mobile app and a tablet-optimized seller application.
- Led the mobile development of both apps, implementing architecture, clean code practices, and seamless integration with backend services and third-party APIs.
- Collaborated closely with backend engineers and UI/UX designers to deliver a high-quality, user-centric experience across both platforms, ensuring optimization, responsiveness, and reliability.
- Contributed to testing, debugging, and continuous improvement, resulting in stable and efficient application in real-world usage.

Flutter Developer at [Ebtikar](#), Cairo, Egypt

January 2022 - June 2022

- contributing to the development of Business Operation Systems (BOS) by Built significant parts of a Flutter-based mobile application, contributing to faster feature delivery by 20%.
- Designed and implemented clean, maintainable code while integrating backend services and optimizing applications to support complex business workflows.

Flutter Developer at [Helpoo](#), Cairo, Egypt

December 2023 - May 2024

- Played a key role as a Flutter Developer on a live production application, focusing on maintenance and continuous improvement.
- Diagnosed and fixed 20+ critical issues, improving app stability and reducing crashes by 40% in the Google Play-published app and App Store-published app, enhancing stability, and user experience.

Flutter Developer at [Magdsoft](#), Cairo, Egypt

July 2022 - September 2024

- Led the development of a dual-application Flutter solution, increasing service request efficiency by 35% for a home services marketplace, consisting of a user app and a provider (service vendor) app.
- Designed and implemented core features including real-time bidding/quotation workflows and in-app chat, ensuring seamless interaction between users and service providers.
- Played a key role in a high-collaboration environment with business stakeholders and cross-functional teams to deliver a production-ready solution.
- Took full ownership of the mobile development process, delivering the applications from concept to completion and supporting post-delivery enhancements.

Flutter Developer at Smart Team Co., Kuwait

November 2024 - January 2025

- Built significant parts of a Flutter-based mobile application, focusing on core features and functionality during the initial development phase.
- Also built a responsive website for displaying offers, supporting the overall product ecosystem.
- Partnered with the team to deliver stable and maintainable solutions before moving on to new opportunities.

Flutter Developer - Team Lead at Joint Executive Company, Cairo, Egypt

October 2024 - April 2025

- Engineered cross-platform mobile applications using Flutter, emphasizing code maintainability, and scalability.
- Led the integration of RESTful APIs and third-party services, ensuring reliable data handling and optimization.
- Partnered with backend engineers and UI/UX designers to deliver robust, user-focused solutions, while continuously improving application stability through testing, debugging, and optimization.

Flutter Developer - Part-Time at [Done Official](#), Jordan

November 2025 - Present

- Played a key role as a Flutter Mobile Developer in a product-based company.
- Designed and implemented new features, optimized applications, and managed API integrations to ensure reliability and seamless user experience.
- Coordinated cross-functionally with product, design, and backend teams, driving high-quality delivery through clean, maintainable code, and best development practices.

Flutter Developer at [Romeya Agency](#), Qatar

January 2026 - Present

- Currently responsible for designing, building, and delivering end-to-end mobile applications for company clients using Flutter. I focus on developing maintainable and scalable solutions following clean architecture principles, ensuring strong code quality, modular structure, and clear separation of concerns. I actively collaborate with stakeholders to translate business requirements into robust, production-ready applications that deliver seamless user experiences.

Flutter Developer at [Matrix Clouds](#)

February 2026 - March 2026

- Supported to developing diverse mobile applications for various industries, such as booking platforms, gym management systems, and other custom business solutions tailored to client needs.

Flutter Instructor - Part Time at Raya Academy, Cairo, Egypt

March 2023 - December 2026

- I Contributed as a Flutter Instructor, delivering structured training programs for students. My responsibilities included teaching Flutter development concepts, guiding hands-on projects, and helping students build real-world mobile applications.

Flutter Instructor at Code It Academy, Cairo, Egypt

January 2022 - August 2024

- I worked as a Flutter Instructor, responsible for delivering structured training sessions on Flutter development. My role focused on teaching core and advanced concepts, as well as mentoring students through hands-on projects.

Education

Bachelor's Degree from HTI (Higher Technological Institute), 10th of Ramadan at HTI (Higher Technological Institute), 10th of Ramadan

September 2019 - January 2024

Grade: 3.57 – Excellent (with Rank)

Skills

Mobile Development: Dart - Flutter - Firebase Services - Responsive Mobile Design - Payment integration (Stripe - PayPal - Pay-Mob) - Google Maps API - Figma (Software) - Professional design - Socket.io - Notification - Flutter Web - Problem Solving - REST APIs - Localization - Pagination - Enterprise Resource Planning (ERP) - Maintenance of Flutter Code - Chat - Well-Structured Architecture - QR Code Integration - User & Merchant Flow Design - Referral Systems (Invite Friends) - Google Maps / Location Services.

Backend Development: Basic JavaScript - Basic Node.js - Basic MongoDB.

General: Communication - Analytical Skills - Trello Jira - Notion - Git - GitHub.

Projects

helpoo • [App Store](#) • [Google Play](#)

A real-time emergency assistance platform that connects users involved in vehicle accidents with a nationwide towing network. The app allows users to instantly report incidents by capturing or uploading media, enabling rapid dispatch of tow trucks across all regions of Egypt to deliver fast, reliable, and location-based support.

Maarfa • [Google Play](#)

An educational platform built to streamline student learning by providing structured content, interactive lessons, and an intuitive user experience. The application enables easy access to curriculum resources, improving engagement and learning efficiency.

Akla • [App Store](#) • [Google Play](#)

Implemented Akla, a multi-role food ecosystem using Flutter. The platform supports User, Kitchen, Delivery, and Admin workflows with real-time order tracking via Socket.io. Integrated payment gateways (Paymob & InstaPay), loyalty system, promo codes, multi-branch management, and full delivery tracking. Implemented role-based authorization, analytics, push notifications (FCM), and a modular architecture ensuring high scalability and maintainability.

Wash Move • [App Store](#) • [Google Play](#)

Built Wash Move, a mobile on-demand car wash platform that connects users with nearby service providers. The application allows users to book car wash services at their location using GPS integration and track orders in real time. Created the project from scratch, covering product analysis, UX design, and full Flutter implementation using REST APIs and Firebase services. The solution focuses on delivering a seamless and intuitive user experience and was successfully published on the App Store.

Mint-Spa • [App Store](#) • [Google Play](#)

Built Mint Spa, a mobile wellness platform designed to streamline the discovery and booking of spa and beauty services. The application allows users to explore services, view specialists' profiles, and manage appointments seamlessly. The project focuses on delivering a clean UX, efficient booking flow, and a smooth end-to-end user experience.

Mint-Spa (Provider & Delivery) • [App Store](#) • [Google Play](#)

Built MintSpa Provider, a provider-side mobile application designed to streamline spa and wellness operations. It allows service providers to manage appointments, handle customer bookings, control availability, and organize schedules efficiently. The application focuses on

improving operational workflow and enhancing provider-client interaction through a clean and intuitive UI.
